## Experience

### AnyDesk Software GmbH, Stuttgart | Software Developer

08/2021 - present

- **Resolved complex technical issues**, e.g. stabilised screen capture on Android remote client by investigating root causes of crashes and applying creative solutions via AOSP code analysis and reverse-engineering.
- Automated Java/C++ `enum` synchronisation by implementing a build-time parser/generator in C++, **reducing run-time errors by 5% and development time by 5%**.
- Implemented complete features (e.g. file manager) within project deadlines despite minimal prior documentation, by integrating multiple Android Java APIs, demonstrating **self-sufficiency and strong communication** within agile, cross-functional teams (also comprising QA, designers).
- Improve Java code quality and test coverage by automating unit testing with JUnit and Mockito, achieving **high first-pass approval rates** for pull requests and **robust performance** across wide range of Android devices.
- Gained extensive experience and domain knowledge, enabling contributions to **team leadership via regular code reviews** and sharing responsibilities of line manager.
- **Proactively expand technical skillset** by staying up-to-date with Android development trends whilst implementing cross-platform UX improvements, such as optimising touch injection on iOS in Objective-C and IME behaviour on Windows in C++.

### Hearing Diagnostics Ltd, Edinburgh | Software Developer

03/2020 - 06/2021

- Linux development in C++17, focussing on UI development with Qt and efficient data serialisation with *FlatBuffers*. Work featured in demos that **secured £715,000** in start-up funding.

### IntiQuan GmbH, Basel | Modelling & Simulation Analyst

07/2018 - 09/2018

- Automated workflow in R for **time savings** during statistical analysis and medical data simulation.

## Open-Source Projects

### Narradir | Android

- Automated board-game narration in Kotlin. The app has 20 thousand+ downloads on Google Play.

### Bouldering Log | Android

- Developed native workout tracker app with Jetpack Compose, *Hilt*, Kotlin Flow, and coroutines in MWM architecture.

## Education

### ETH Zürich | M.Sc. Computational Biology and Bioinformatics

09/2016 - 08/2019

### Imperial College London | B.Sc. Biotechnology

09/2013 - 06/2016
