Experience

AnyDesk Software GmbH, Stuttgart | Software Developer

08/2021 - present

- Automated `enum` synchronisation between Java and C++ by implementing a build-time parser/generator, reducing run-time errors and leading to time savings during development.
- Implemented file manager feature on Android, with responsive layouts, drag-and-drop support, and automatic detection of removable storage, integrating multiple Android SDK APIs.
- Stabilised screen-capture functionality on Android remote client by investigating root causes of crashes and applying creative solutions through AOSP code analysis and reverse-engineering.
- Automate unit testing with JUnit and Mockito to ensure code quality, achieving high first-pass approval rates for pull requests and robust performance across wide range of Android devices.
- Proactively proposed and implemented UX enhancements on Android, including password-visibility toggle and splash screen, whilst monitoring app store reviews to identify and address major pain-points.
- Demonstrated strong communication and self-sufficiency by independently delivering new, complex features despite minimal prior documentation, whilst collaborating effectively with cross-functional teams (e.g. QA, designers) in agile environment. Key features include: account, revenue operations, setup checklist, UI redesign.
- Gained extensive experience and domain knowledge, enabling me to conduct regular code reviews and share responsibilities of line manager.
- Actively stay up-to-date with Android development trends whilst venturing into new areas of expertise, such as optimising touch injection on iOS and IME behaviour on Win32, to improve UX consistency and platform synergy.
- Developed strong time estimation and task prioritisation skills, enabling consistent, reliable delivery within project deadlines.
- Contribute to the success of AnyDesk, which has surpassed 50 million downloads on Google Play Store ▶.

Hearing Diagnostics Ltd, Edinburgh | Software Developer

03/2020 - 06/2021

- Linux development in C++17, focussing on UI development with Qt and efficient data serialisation with *FlatBuffers*. Work featured in demos that secured £715,000 in start-up funding.

IntiQuan GmbH, Basel | Modelling & Simulation Analyst

07/2018 - 09/2018

- Automated workflow in R for time savings during statistical analysis and medical data simulation.

Open-Source Projects

Narradir | Android

- Automated board-game narration in Kotlin. The app has >10 thousand downloads on Google Play Store.

Bouldering Log | Android

- Developed native workout tracker app with Jetpack Compose, *Hilt*, Kotlin Flow, and coroutines in MWM architecture.

Education

ETH Zürich | M.Sc. Computational Biology and Bioinformatics

09/2016 - 08/2019

Imperial College London | B.Sc. Biotechnology

09/2013 - 06/2016

Skills and Interests

Programming langs.	Java • Kotlin • C++ • Bash • Objective-C • Swift • SQL • Python • XML • HTML • CSS • JavaScript
Android	Jetpack Compose • Android SDK • Android NDK • AIDL • Gradle • Espresso • JUnit • Mockito
Frameworks & Tools	Git • Jenkins • UIKit • SwiftUI • Jekyll • Qt • CMake • MPI
Project Management	Kanban • Jira • Confluence
Graphic Design	Inkscape • Gimp • Material Design
Languages	English (native) • German (Goethe-Zertifikat C1) • Mandarin (good) • Dutch (basic)
Hobbies	social-deduction board games • cycling • bouldering • acoustic guitar
